Protocol Standards Necessary for Interactivity
TEXT:
By LESLIE ELLIS
     WASHINGTON - Interactive services over cable will target a variety of
home terminals including TVs, PCs and game consoles for the foreseeable
future, panelists from the set-top hardware, computer software and
integrated circuit industries said.
     They agreed, as they addressed the Multichannel CommPerspectives'
Convergence III conference here last week, that in the short-term, the TV
will remain in the family room, PCs in the study and interactive games in
people's hands.
     But at least one panelist feared a weakened interactive equipment
market if protocol standards are not hammered out. 'Too much fragmentation
will be harmful to the market. Standardization does not mean domination,'
said Timothy Yiu, corporate business development manager for Intel Corp.
     Citing consumers' historical slowness in adopting consumer electronics
devices like TVs and game consoles, Yiu said new interactive terminals -
those that don't currently fall into the set-top box or PC categories - are
at least three to five years away. 'And, (content) developers get
interested when output levels reach a few million units per year. I'm quite
skeptical that will happen,' Yiu said.
     Candidates in the new terminal category include 'smart phones,' which
resemble standard touchtone telephones but sport an LCD display instead of
a touchtone pad for use in banking or shopping at home; game consoles; and
PCs.
     Game consoles, Yiu said, offer high penetration within homes with
children, but are limited by single-function operation and
consumer-perception problems. He cited a market test in Japan, where
Nintendo failed to entice business users to perform banking and finance
functions with a game-like terminal. 'They didn't want to trust their money
with what they perceived as a toy,' Yiu said.
     Cost is also an issue, particularly with cable operators who
ultimately adopt terminal technologies, said Vito Brugliera, vice president
of marketing and product planning for Zenith Electronics Corp.
     'For every $50 of cost you put into the home,' cable operators expect
'at least $1 per month in revenue to break even,' Brugliera said. For a
$500 box inside the home, then, cable operators would have to bring in $10
a month to break even.
     Another consideration is TV set longevity. A TV set bought today,
Brugliera said, has a 50 percent probability of being in the home 15 years
from now. And, he said, TVs today still use interlaced NTSC display
technology - not Super VGA, VGA or even CGA quality. 'I would suggest that
(content) developers out there go find an old set and design from there,'
Brugliera cautioned.
     PCs, which now number 31 million in 22 million U.S. homes, Yiu said,
are another way to get interactivity into the home. But while computers
offer a large installed base and an open interactive platform, they are
limited by geographic location within the home, 'computerphobia' and
mediocre incoming bit rates.
     To combat consumer's computer phobias, the computer industry is
working on a desktop management standard, said **David   Pool** , president
and CEO of Spry Inc. Participants including IBM Corp., Digital Equipment
Corp., Novell Inc., Microsoft Corp., Sun Microsystems Inc. and Intel Corp.
make up a task force targeted at 'plug-and-play, easy-to-use' solutions.
     But, Pool said, further refinements are needed, especially as users
become more and more inundated with interactive information. 'Over time,
the emphasis will be on the front and back ends: What information can I get
to, and how is that information represented?' Pool said.

He cited the Internet's current 2 million host base as an example of a potential information overload, saying that software developers will be working on index and retrieval solutions to help consumers wade through vast stores of information. 'If I have 300 **electronic** mail **messages** , I need to be able to retrieve the crucial ones first,' Pool said.

TEXT:
JEANINE SALLA is responsible for what could be one of the most elaborate movie promotions ever conceived. And she doesn't even exist.

But there's her name, in the credits of the trailer and poster for Steven Spielberg's upcoming summer flick, "A.I. Artificial Intelligence," next to the title "sentient machine therapist."
Don't know what that phrase means? Then do a simple Web search. You'll find that Salla has her own site, dated, curiously, about the year 2142. It's one piece of a puzzle game of sites all set around the same time and all presumably created for one purpose: to promote the movie.

This "underground" undertaking, unprecedented even by Hollywood standards, involves the mysterious murder of a character named Evan Chan and clues that are hidden in commercials, print ads, telephone messages and even live promotional appearances, not to mention on the Internet. It's also the biggest and latest example of just how far entertainment companies will go to hype product.

What sets the "A.I."-related Web game apart from other promotions is its enormity-so far there are about 30 sites in the game and new ones keep popping up-and originality, as well as the fact that no one involved with its design will talk about it. Thousands participate in the game online, even organizing into groups such as the Cloudmakers (www.cloudmakers.org), which is composed of about 4,500 people dedicated to solving the mystery.

There aren't really any directions for playing the game. There are just puzzles and clues, which can appear anywhere.
For example, in May at the Massachusetts Institute of Technology, Kathleen Kennedy, an "A.I." co-producer, and Haley Joel Osment, the young star of the film, made an appearance to discuss the movie, even fielding a question from a presumably planted audience member who asked what it was like to work with Jeanine Salla. After the presentation, Kennedy passed out Salla business cards with further clues for the game's players.

"It's clear to me that the game isn't just a marketing and promotional ploy," Andrea Phillips, 26, of Oceanside, wrote in an e-mail to Newsday. "The degree of effort that's gone into the making of this game is so deep, the sheer amount of content so vast that I've started to think it was meant to stand on its own feet."

Although Phillips, who works at a software company, has been looking forward to seeing the film, the game has increased her interest. The key to the game's success, she said, is that it has a compelling story line; without that, few would bother playing.

THE "A.I." GAME shows how studios are using the Internet to market films in inventive ways. Many in the movie business cite the success of 1999's "The Blair Witch Project" for sparking Hollywood's new interest in the power of the Web.
With a limited budget, those behind "Blair Witch" created a word-of-

mouth campaign through the ingenious use of its Web site and a mock documentary on the Sci-Fi Channel to publicize the purported "disappearance" of three student filmmakers in the woods of Maryland.

Taking a grass-roots approach, Artisan Entertainment, which distributed "Blair Witch," passed out fliers and promotional material to get people to the Web site, aiming to lend the feel of stumbling onto something yourself.

"We've always tried to go under the radar and not register as hype," said Amorette Jones, Artisan executive vice president of worldwide marketing. "You want it to feel organic to the movie."

According to an April study by PricewaterhouseCoopers, a professional-services organization, the growing number of entertainment choices provided by the Internet, television, film and other media puts increasing pressure on entertainment companies in the competition for viewers. So the ability to generate buzz by word of mouth (PR types call it "viral marketing," spreading like a virus on the Internet) will be important to gain market share and influence.

Companies taking the traditional approach to marketing, the report said, will fall behind. What they should do instead is develop innovative ways of reaching small, focused audiences. Hence, if you want to get the attention of computer geeks, you air a "Blair Witch" "documentary" on the Sci-Fi channel; if you want to get the word out about the "A.I." online game, you tip off one of the movie gossip Web sites.

"Word of mouth is most powerful when it's seen as genuine, and it's not powerful when it's seen as hype," said Bennett McClellan, the director of PricewaterhouseCoopers' entertainment and media practice. "How do you use the medium uniquely to attract the people you want to attract and get them to the product you want to sell to them? Viral marketing is far from a science. It's still in the realm of alchemy."

But that doesn't mean companies aren't trying. Many settle for quirky Web sites, such as last year's "Nurse Betty," which created a faux fan site for the fictional soap opera central to the film, or "The X-Men," whose makers set up an "official" site for the character of the anti-mutant senator. The site was later "defaced" by pro-mutant hackers.

Those who design these sites, however, are starting to get savvy. Last year, a well-publicized "glitch" in the official site of the first CBS "Survivor" series, supposedly found by someone snooping around the site's computer code, suggested Gervase Peterson would win the million bucks. He didn't, but there was speculation the show's producers created the glitch intentionally to throw people off (and the resulting press didn't hurt).

The makers of the "A.I." game also have tried to outsmart those on their trail. Typically, when a studio sets up a Web site containing fiction, it registers it under the company's name. That's a dead giveaway the site's promotional, and the registry is found fairly easily.

Those behind the "A.I." game, though, registered their sites under various people with the last name Ghaepetto and included fake addresses and phone numbers. Ghaepetto, of course, is a wink-wink reference to Gepetto, whose Pinocchio is echoed in Osment's artificial boy in "A.I."

The MIT gathering wasn't the only time the "A.I." fantasy played out in the real world. In May the "A.I." folks held "Anti-Robot Militia" rallies in New York, Chicago and Los Angeles, where actors pretended to protest artificial beings-while also providing clues for the game players who gathered there.

'STUDIOS ARE finally hiring the right people or figured out that the way you engage people online is to make it interactive," said Patrick Sauriol, the creator of the Vancouver-based movie gossip site Coming Attractions. "I think the Internet people are really savvy. They know when they're being taken for a ride. They know the "A.I." game) is a promotional thing and it's in the best interest of Warner Bros., but it's fun."

Sometimes, a studio has no choice. Artisan passed out fliers for "Blair Witch" not only because it was innovative but also because it was cheap. Two of its releases, last year's "Requiem for a Dream" and the recent "Center of the World," had elaborately designed Web sites to pique visitors' curiosity about the films, because the studio lacked the luxury of large budgets to promote them.

IFC Films, the distribution company under the Independent Film Channel's IFC Entertainment Division, has found itself in the same situation and is hoping to create a splash with its site for the upcoming "Jump Tomorrow," a film about the search for a soulmate.

The site, designed by the company that did the Artisan sites for "Requiem for a Dream" and "Center of the World," allows you to track what other visitors to the site are doing while you're navigating it yourself - with the idea that perhaps you'll run into your soulmate.
Last year, months before releasing "Memento," IFC Films tried to build up anticipation for the film by posting Polaroid photos with the film's Web address (www.otnemem.com), memento spelled backward, in bookstores and coffee shops.

The site-created by the film director's brother, who also came up with the film's story- uses invented newspaper articles to create the back story of a man searching for his wife's killer, but the site intentionally did not reveal a link to a film. Whether the site helped the film's popularity is undetermined, but "Memento" turned out to be a hit.

"I don't think anyone knows how it translates into box office, but I think it definitely makes an impact," said Bob Berney, IFC Films' senior vice president of distribution.

Bob Holtzman CORRECTION: The first name of **David Holtzman** , the chairman and chief executive of **Opion** Inc., a market forecasting company in Herndon, Va., was incorrect in yesterday's Plugged In cover story. pg. A02 ALL 6/21/01) would beg to differ. As chairman and chief executive of **Opion** Inc., a market forecasting company in Herndon, Va., he is attempting to predict trends by analyzing public Internet **message boards** and identifying which users wield the most influence; what these people say to others in the group affects a product's buzz, which **Opion** , using a mathematical model, tries to quantify.

He said he got the idea when, as the chief technical officer of domain-name registrar Network Solutions, he noticed the company's stock fluctuated in correlation to what was being said on financial **message boards** .

The myth about viral marketing is that something that's bad to begin with suddenly becomes good if enough people pay attention to it, he said. What he has found is that word of mouth is driven by something that is compelling but seemingly undiscovered.

A back story (as with soap operas, "Twin Peaks," "The X-Files") or an air of mystery also drive word of mouth. Examples include the fear spread by the 1938 "War of the Worlds" broadcast about a Martian invasion, and, more to the point and more recently, the question of whether three student filmmakers really disappeared in the Maryland woods.

The only reason the Internet is different, Holtzman said, is because it makes it easier to spread the word. "What this sort of thing does is accelerate the perception of quality." Virtual Reality Of a New Kind LIKE THE ONLINE MURDER mystery inspired by the upcoming film "A.I. Artificial Intelligence," a video game called "Majestic" will attempt to make the jump between reality and fiction. Since April, thousands have been involved in attempting to solve the "A.I." movie-related mystery, in which players receive clues in everything from TV commercials for the film to live promotional appearances. They then must navigate a series of inventive Web sites and complex puzzles and riddles to advance the story. The method of this madness is remarkably similar to an upcoming video game from

Electronic Arts called "Majestic." The game is promoted as starring you, the player, who must navigate Web sites both real and fake in order to solve a mystery. The twist is that the game also involves calling phone numbers, sending e-mail, receiving faxes and using instant messaging to gather clues in a real-time format. For example, if you call a number and the message says that the person will contact you tomorrow with some information, the call really will come the next day, to your own telephone. If you're connected to the Internet, a game character may initiate a chat session with you via AOL Instant Messenger to share information that way. The goal is to make you feel as if you're the center of your own suspense thriller, said Neil Young, the game's creator. The game will be subscription-based; players would pay $10 a month, and the game will unfold in chapters. It also will allow people to establish certain limits, such as keeping the game from calling you when your kids are in bed or avoiding clues by fax if you don't have a fax machine. Young said one way he's hoping to promote "Majestic," which comes out in "late June," is through word of mouth, similar to the manner in which the "A.I." movie-related online game took off. "The idea is that you should be with your friends when the game calls you, because that would be incredibly powerful," he said. "I think word of mouth is the only true form of marketing. If someone refers me to something, I'm at least going to give it a go." -Monty Phan

CAPTION:
1) AP Photo for Newsday - Amorette Jones, a top marketing official for "Blair Witch" distributor Artisan Entertainment: "We've always tried to go under the radar and not register as hype." 2) The mystery springing from "A.I." involves teh 22nd-century murder of a character named Evan Chan, shown above with his wife, Nancy, at www.familychan.org, and in an autopsy report from www.coronersweb.org/ec42031487.html. 3) Warner Bros. Photo / David James - At marketing events for "A.I.," which stars Haley Joel Osment and Jude Law, clues to the online game are passed out to participants.

Abstract (Basic): WO 2003005639 A1
      NOVELTY - Involves distributing a token from an authentication
   authority (20) to the organization (10) which can then be provided by
   the organization to its member (30). Members register with the
   authentication authority and designate a pseudonym to associate with
   the organization and also provide the membership token as part of
   membership on the organization.
      DETAILED DESCRIPTION - An INDEPENDENT CLAIM is included for an
   authentication authority.
      USE - For bounding a pseudonym identity to an organization to
   enable user of identity to anonymously post messages or documents to an
   electronic forum e.g. Web based message boards, USENET news groups and
   electronic mailing lists.
      ADVANTAGE - Provides assurance that user claiming to be a member or
   representative of the organization is legitimate.
      DESCRIPTION OF DRAWING(S) - The drawing shows a schematic diagram
   of the system used to implement the method.

Abstract (Basic): US 20020062368 A1
     NOVELTY - A request containing two local pseudonyms, where each
pseudonym consists of handle and site name, and universal pseudonym
with unique handle selected by user, is received from a user. The
universal pseudonym and local pseudonyms in the received request are
stored in data store (20).
     USE - For registering universal pseudonym in discussion forum in
electronic community such as vehicle supporting electronic discussion
such as web based and proprietary message board, mailing list, Usenet
news group devoted to financial market and building model aircraft,
using local area network, wide area network, Internet.
     ADVANTAGE - By storing local pseudonyms and universal pseudonyms,
the entry of new participants can be identified. By evaluating the
electronic message posted by user, the reputation across multiple
communities can be established. Several messages can be collected from
several forums without overloading computer systems.
     DESCRIPTION OF DRAWING(S) - The figure shows the schematic diagram
of pseudonym registration system.

Abstract (Basic): WO 200065507 A2
     NOVELTY - The method involves maintaining the business rule engine containing information reflecting rules and targets, and associations between the rules and targets. Applications are permitted to obtain an ordered set of rules through the engine.
     DETAILED DESCRIPTION - The method involves maintaining the rules which correspond to business policies in a location separate from that of application code associated with the applications. An interface is provided such that each application can use a set of methods to receive information corresponding to rules and target. Each rule is stored in a singleton object. The business rule engine contains a business rule engine class that accepts requests for targets and rules from applications. The class provides a handle associated with the engine to applications. An INDEPENDENT CLAIM is also included for system for maintaining business rule engine.
     USE - For providing business rules to e-commerce applications such as entire bookstore, training site or domain name registry site or an accounting application. For on-line business service provision to customer's through data processing system connected to internet.
     ADVANTAGE - Solves the inherent problems with existing systems that incorporate business rules by providing a business rule engine that serves as a business rule repository for business rules. Provides a facility to modify, add, or delete both business rules and targets and modify the order of execution by the application.
     DESCRIPTION OF DRAWING(S) - The figure depicts a flow chart of steps performed by the business rule server when providing business

rules to applications

   accordingly. The **ranked** messages are stored and displayed to a
   designated recipient.
      DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the
   following:
      (1) method for handling and enhancing utilization of **e - mail**
   marketing messages to designated recipient;
      (2) **e - mail** address format;
      (3) system for mailing list manager; and
      (4) system for search apparatus.
      USE - Dynamic online **e - mail** catalog for electronic commerce
   (e-commerce) transaction.
      ADVANTAGE - Since the received messages are **categorized ,**
   arranged and **ranked ,** reliably the deluge of messages from sending
   parties is avoided.
      DESCRIPTION OF DRAWING(S) - The figure shows the block diagram of a
   digital signature processing system.

					CIP of application US 2003220419

Abstract (Basic): US 20040039786 A1
      NOVELTY - The system has a bulk filter (114) to **categorize** one or
   more received messages based on a range of classification, the range
   spanning from bulk classification of **values** to non-bulk
   classification of **values** . An urgency filter (120) classifies the
   received messages in order to facilitate processing of the messages. An
   adjustable threshold setting determines differences between the bulk
   and the non-bulk classification of **values** .
      DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the
   following:
      (1) a computer readable medium with computer readable instructions
   for implementing the two filters
      (2) a method that facilitates message processing.
      USE - Used for managing messages received in Internet and wireless
   communication system.
      ADVANTAGE - The system facilitates efficient and automatic
   processing of information while mitigating the costs of manual
   interventions.
      DESCRIPTION OF DRAWING(S) - The drawing shows a schematic diagram
   representing bulk filtering.
      Bulk filter (114)
      Urgency filter (120)
       Email (130)
      Policy component (150)
      Bulk folder (160)

US 6519580	B1		21	G06F-017/00	

Abstract (Basic): US 6519580 B1
      NOVELTY - A set TR, representing the set of training documents is
   created, such that the set suits rule induction. A Rule set is
   generated by combining the various R(C) generated for each **category** ,
   and the confidence **level** is computed. The computed confidence **level**
   is added to the corresponding rule and the final Rule set comprising
   rules and corresponding confidence **level** is generated.
      DETAILED DESCRIPTION - INDEPENDENT CLAIMS are included for the
   following:
      (1) text **categorization** method; and
      (2) decision-tree based symbolic rule induction system.
      USE - For **categorizing** messages, documents containing text such
   as **e - mails** , news, patents, case summaries etc.
      ADVANTAGE - Automatically **categorizes** messages or documents and
   provides a high performance system. Also provides a system with
   excellent recall, high precision and high training speed, insight and
   poor error **rate** .
      DESCRIPTION OF DRAWING(S) - The figure shows flow chart
   illustrating the steps for inducing decision-tree based set of symbolic
   rules.
      pp; 21 DwgNo 1/8

Abstract (Basic): US 20020107712 A1
       NOVELTY - **Categorization** scheme (220) is formed based on data
collected from business domain such as business processes, work flow,
etc., and technical structure of communication **relevant** to
categorization . Examples of electronic communication corresponding to
categories in the scheme (220) are labeled to be used as training and
test data. The scheme (220) is validated with respect to technical
performance and business requirement.
       DETAILED DESCRIPTION - An INDEPENDENT CLAIM is included for
electronic communication routing method.
       USE - For **categorizing** incoming **e - mails** on other electronic
communication in business environment.
       ADVANTAGE - Improves organizational efficiency and minimizes setup
time by forming a **categorization** scheme based on business processes,
personal skills and work flow of an organization receiving the
electronic communication.
       DESCRIPTION OF DRAWING(S) - The figure shows a high **level**
analysis of the factors to be considered in constructing the
categorization scheme.

US 6374290	B1		9	G06F-013/00	

Abstract (Basic): US 6374290 B1
    NOVELTY - A virtual **community** (30) comprising a **group** of
  clients (10-13), formed based on client profile, is assigned a **group**
  of ratings. The virtual **community** is provided with access to a set of
  article **groups** , if the **rating** of the article **groups** is within the
  ratings of the virtual **community** .
    DETAILED DESCRIPTION - An INDEPENDENT CLAIM is included for server
  operating method.
    USE - For distributing information on various technical and
  non-technical **topics** such as computers, science, recreation,
  politics, and sex between virtual **communities** , in computer networks.
    ADVANTAGE - Clients in the virtual **communities** can self select
  policies, as well as their own filtering options for the articles
  distributed within their virtual **community** . Provides an efficient way
  of monitoring abusive users, as clients are allowed to post new
  articles to the **community** . Thereby, the Internet service providers,
  server administrators are allowed to provide valuable information
  content to users, while enabling undesired content to be excluded based
  on the **community** and client profiles.
    DESCRIPTION OF DRAWING(S) - The figure shows a client-server
  network having virtual servers.

					Provisional application US 9632461
					CIP of patent US 5758257

Abstract (Basic): US 6029195 A
     NOVELTY - Target profiles are generated **relevant** to contents of
target bulletin boards. The user preferred data is retrieved for each
user, using the profiles. Virtual search objects **relevant** to user are
generated. Each bulletin board is scanned **relevant** to target object
and user **groups** are classified depending on their interests.
     DETAILED DESCRIPTION - The user **groups** having common interest of
particular object data is identified. Then, the identified user is
matched with the other users for creating a new bulletin board. The
matched user **group** is generated as **E - mail** list and the list is
forwarded to the concerned user. The new users **relevant** to the new
bulletin board are added in the user's list.
     USE - For user interactive electronic information providing system
in Internet used in providing news, advertisements and various data.
Also used in TV broadcasting, advertisement research and for on-line
video conferencing used for business, schools and job training
purposes.
     ADVANTAGE - Facilitates accessing of desired data with less
accessing time, by modifying the electronic bulletin boards
periodically. Eases editing of documents in online conferencing,
thereby promotes product design and operativity.
     DESCRIPTION OF DRAWING(S) - The figure shows the flow chart
representing the user interactive data accessing method.

Patent Details:

Patent No	Kind	Lan	Pg	Main IPC	Filing Notes
JP 2000132509	A		15	G06F-015/00	

Abstract (Basic): JP 2000132509 A
      NOVELTY - Degree of relationship between an user and other users
  currently involved in network communication, is calculated based on
  characteristic **value** corresponding to **keyword** previously registered
  by the user. The **relevant** user identifications are displayed on the
  screen in response to the calculated degree of relationship.
  Information on a particular user is displayed by selecting suitable
  icon on the screen.
      DETAILED DESCRIPTION - The **keyword** registered beforehand by the
  user is acquired as the user's individual characteristic **value** . The
  keyword is assigned a priority **level** during processing. INDEPENDENT
  CLAIMS are also included for the following:
      (a) communication service system;
      (b) program for communication service procedure
      USE - For communicating with an individual or arbitrary companions
  belonging to specified **group** or unspecified **group** for **community**
  creation assistance on internet.
      ADVANTAGE - Existence of each of the user on a network and their
  correlation are recognized and each individual information can be
  referred.
      DESCRIPTION OF DRAWING(S) - The figure explains the steps involved
  in the communication service procedure.
      pp; 15 DwgNo 1/10
Title Terms: COMMUNICATE; SERVICE; PROCEDURE; CALCULATE; DEGREE; RELATED;
  SPECIFIC; USER; USER; BASED; CHARACTERISTIC; **VALUE** ; CORRESPOND;

SYSTEM FOR PUBLISHING, ORGANIZING, ACCESSING, AND DISTRIBUTING INFORMATION
ON COMPUTER NETWORK

PUB. NO.:   2001-331518 [JP 2001331518 A]
PUBLISHED: November 30, 2001 (20011130)
INVENTOR(s):   ALEXANDRE DAIYON
APPLICANT(s): INSTRANET INC
APPL. NO.:   2000-301215 [JP 2000301215]
FILED: August 24, 2000 (20000824)
PRIORITY: 00 576946 [US 2000576946], US (United States of America), May
               22, 2000 (20000522)
INTL CLASS: **G06F-017/30**

                         ABSTRACT
PROBLEM TO BE SOLVED: To provide a system based on a computer network
providing an effective system for publishing, constituting, accessing and
distributing information on the computer network while solving some or all
of problems of conventional technology.

SOLUTION: The system uses 'dimensions' for filtering information on the
computer network. The dimensions are **categories** such as geographical
positions, enterprise departments, employee classifications and periods.
Each dimension has a single or plural 'elements'. The elements are
originally ' **values** ' of the dimensions. A ' **community** ' is a **group** of
values of a single or plural dimensions and segments of documents or
information in all usable documents or information, e.g. 'slices' are
defined. A theme is a **subject   category** . The documents and document
parts can be related to themes and constituted according to the themes.

  Detailed Description

Detailed Description
...   deja.com provide search engines enabling users to search for posts
  directly related to specific **topics** . For example, a user can search a
  group such to view posts related to a **topic** such as "Jonathan Franzen."
  This may turn up a great deal of information regarding the author, and
  topics of interest to readers. Although it is sometimes possible to find
  information directly on **topic** , posted by legitimate readers, one often
  has to sift through thousands of messag es related to a given **topic** ,
  reading each one, to determine if a post has personal **relevance** to a
  user or **group** . Another disadvantage is the prevalence of
  SPAM (unsolicited commercial **email** messages) and other advertisements
  disguised as "genuine" posts to such **groups** . Consequently, newsgroups
  are not a
  convenient or, more importantly, **relevant** source of information for
  many
  consumers, particularly those looking for information regarding **books** .

  [005] Online forums, though, have been lacking in that the information is
  difficult to sift...

  ...reading, electronic books, movies, DVD's, compact disc's or any other
  item for which **groups** may meet to discuss or which may be particularly
  relevant to a **discussion**   **group** . The member interface 20 may also
  include public and private **discussion** boards. The private **discussion**
  board may be viewable only to members of the club. The public **discussion**
  board may viewable to anyone at
  thewebsite. Theremayalsobeaninter- **groupdiscussionboard** ,whichisonly
  viewable by people who are a member of at least one **group** .

[027] One of the reasons people may join similar interest clubs is to glean...
